

# With **Agromaster**<sup>TM</sup> I know I am in control

**Complete nutrition with controlled release nitrogen.  
Providing enhanced crop efficiencies.**

Superior in performance. Simple to use.

Agromaster combines ICL's advanced coating technology with specially selected conventional granules. This powerful combination provides controlled release and high quality performance in one uniform product. Low in chloride. Suitable for sensitive crops.

Available in 25kg, Agromaster **12-5-15-14+2Ca+0.6Mg** with 30% of the nitrogen coated giving 2-3 months of continuous feeding. Now also incorporates Polysulphate® – a unique crystalline mineral rich in Sulphur, Magnesium, Potassium and Calcium.

Agromaster<sup>TM</sup> and Polysulphate® are products marketed by ICL. For more information please visit [www.icl-sf.com.au](http://www.icl-sf.com.au) and [www.polysulphate.com](http://www.polysulphate.com).

Contact ICL for product availability.

**ICL** Specialty Fertilizers

## Superior in performance. Simple to use.

Agromaster has been proven over a wide range of crops to improve yields. The controlled release technology delivers continuous nutrients over time matching a crop's nutrient requirements. Additional benefits: reduced labour, high crop quality and reduced environmental impact.

**Agromaster™** 12-5-15-14+2Ca+0.6Mg with 30% of the nitrogen coated. It delivers enough controlled release nitrogen to ensure continuous feeding for 2-3 months.

**Poly sulphate®** with immediately available potassium, sulphur, calcium and magnesium, provides essential nutrients required to optimise crop quality.

### Recommended use

Apply Agromaster before transplanting or 20-30 days after seeding. It is recommended to work Agromaster into the top 5cm of the soil.

\*Increase in yield is based on actual figures provided by trial works conducted on different crops. Based on normal season growing conditions and recommendations by ICL technical advisor. Results may vary.

Please contact an ICL advisor for customised program for your specific crop and requirements.

**Controlled release fertiliser matching plant demand**

**More efficiency higher yield**

**Proven yield increase\***

**Save time and labour with one application for the growing season**
