

ProSelect®

Piranha
Agrostis stolonifera

Product characteristics

Average Sowing Rate
5 g/m²

Mowing Height
2-5 mm

Product information

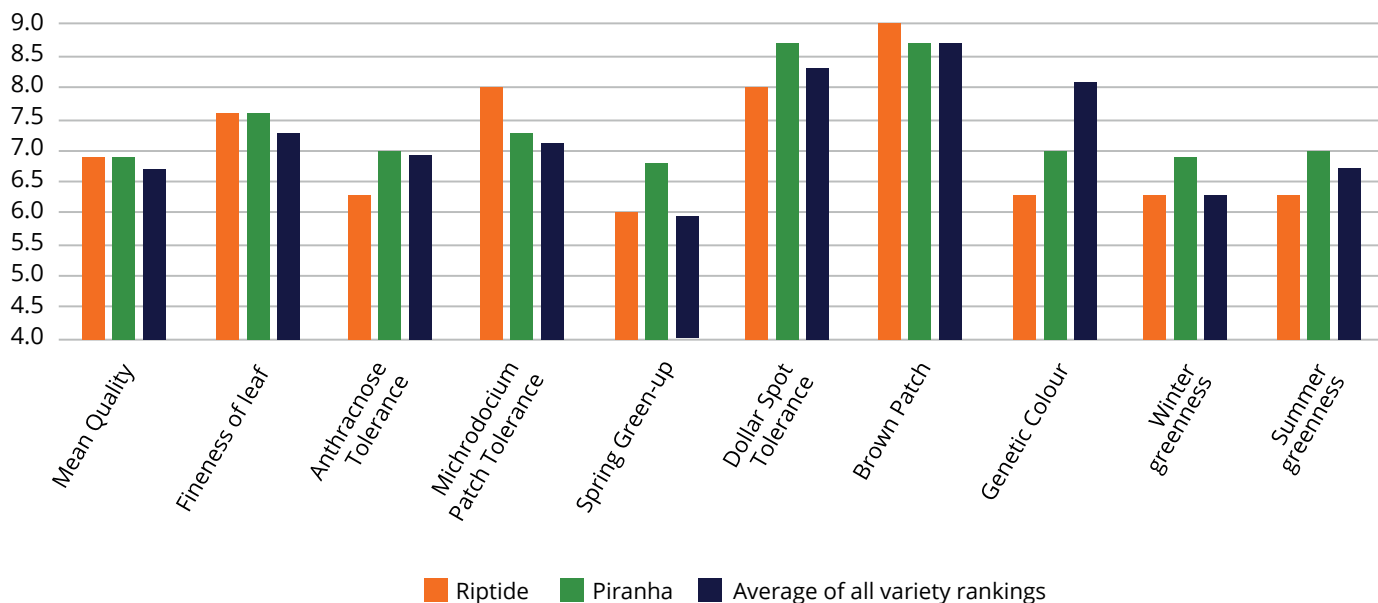

Piranha, a brand-new creeping bent grass which recently gained EU registration.

From the same stable as Riptide which has gained wide European following, Piranha offers those greenkeepers who are challenged with extremes of localised weather condition, an ideal solution. Early spring green-up suits courses of higher altitudes and high tolerance to heat, makes Piranha a truly pan-European variety capable of tolerating many turf stresses. Piranha also provides a darker green colour as well as excellent Anthracnose, Dollar spot and Brown patch disease tolerance.

Product advantages

- High tolerance to turf stresses
- Heat & cold tolerant
- Excellent Dollar spot, Anthracnose & Brown patch tolerance
- Deep rooting
- Keeps good colour all year round
- Early spring green-up
