

Transporter

Transporter is a unique wetting agent formulation specifically designed to enhance the performance of Entomopathogenic Nematodes (EPN's) to control a range of soil and media pests.

Transporter has a penetrant and residual mode of action. When included as part of an EPN application

Transporter penetrants will improve coverage of the application benefiting the contact mode of action of the EPN's.

Transporter residual agents allow the treated area to hold more water, this results in more beneficial conditions for EPN survival improving the longevity of application.

Transporter has been tested with the commercially available range of EPN's and has no detrimental effects on EPN health.

Application Rate: Apply as a tank mix with EPN's at an equivalent rate of 1 litre per Ha with the water volume recommended on the EPN label

Mixing Instructions

Half fill the sprayer tank or watering can with clean water. Add the required amount of the product and mix thoroughly whilst adding the remainder of the water.

Health and Safety:

IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.

Product Code: 06155

Cert No: 1L (12x1L)
