Fertilizer Tips

Tech Sheet for Geraniums

Fred Hulme, PH.D., Technical Service, ICL Specialty Fertilizer

Overall comments on crop:

- Geraniums are heavy feeders especially during the vegetative stage.
- Typical problems are poor size and light green foliage due to inadequate nutrition.
- Adequate magnesium will ensure dark green foliage.
- Some Geranium cultivars are sensitive to micronutrient toxicities especially if root-zone pH's drop below 5.8.

100% Water soluble fertilizer (WSF) program:

- Ideally fertilizer selection should be based on a current water analysis (contact your ICL representative for more details).
- A good general program would be Peters Excel® 15-5-15 Cal-Mag @ 200 to 250 ppm N on a constant basis.
- Commence feeding at planting or as soon as cuttings are rooted.

100% Controlled release fertilizer (CRF) program:

- Osmocote® Plus (5-6 mo. @ 70°F in N. zones/ 8-9 mo. @ 70°F in S. zones) incorporated at 6 to 8 lbs. per cu. yard.
- Media should be used within 2 to 3 weeks after mixing in CRF.
- Select a longer term product to extend feeding once plants get shipped.

Combination fertilizer program:

- Osmocote® Plus (5-6 mo. @ 70°F in N. zones/ 8-9 mo. @ 70°F in S. zones) incorporated at 3 to 6 lbs. per cu. yard.
- Fertigate with Peters Excel® 15-5-15 Cal-Mag @ 100 to 150 ppm N on a constant basis.

Supplements:

- Add Magnesium in form of Peters Excel® Magnitrate 10-0-0 @ 4 oz. per 100 gallons on a constant basis if Mg is lacking in program.
- Apply a medium rate of H2Pro® liquid before shipping to help prevent wilting in the post-harvest phase.

Problem solving:

- If plants are chlorotic and pH is above 6.8; apply a low rate of Liquid Stem (2 fl. oz. per 100 gallons).
